### Plasma

Plasma is an exceptionally strong polypropylene material. It is available in light tinted translucent shades as well as the traditional Clear Natural. We also offer three solid colours, the silver and blue with a special sparkle effect. Plasma is suitable for numerous uses including covers and overlays, as well as innovative creative and decorative applications. Using one of the tinted shades with a printed image showing through gives a particularly nice effect. Due to its inherent strength Plasma is virtually indestructible. It is impossible to tear and cannot be stapled. It can be folded but requires a score with a craft knife.

### Colorflute

Colorflute is the genuine self coloured corrugated card. So many alternatives are white paper printed with the colour. This looks fine until you cut it and find the edge shows white somewhat spoiling the intended effect. Why settle for second best when you can have the real thing? Colorflute's rich depth of colour has numerous craft possibilities. The colour palette is enhanced with the addition of the Gold and Silver options which have a metallic mirror film applied to the corrugated card base resulting in a unique effect.

Colorflute - the finest corrugated on the market.
